Tristone Global Supplier Logistics Manual 2.0 – New Release

Dear valued Supplier,

We are pleased to announce the release of Tristone's Global Supplier Logistics Manual 2.0.

Based on the evolving challenges not only in the automotive industry, we as a company are being forced to push ahead with digitalization and standardization.

Competition in all kind of markets has become significantly tougher in recent years. The increased individuality of our customers places high requirements on our business, and as a result also on the logistics functions, in terms of quality and flexibility.

This pushes us to reflect, adjust and streamline our logistics processes. But also it requires in same way a clear and open communication with all parties along the supply chain. Consequently we need to improve and implement smart initiatives to position our company well for the current and future challenges.

An essential tool to achieve the challenges will become Tristone's Global Supplier Logistics Manual (GSLM), along with its corresponding annexes.

For more details please visit our website: <https://tristone.com/downloads/>

Here you'll have access and also the possibility to download all relevant documents and templates.

1/2

- Global Supplier Logistics Manual (GSLM)
- Supplier Packaging Manual (SPM)
- Supplier Packaging Catalogue (SPaC)
